Abstract (en)
[origin: EP0563607A1] An anchoring element for panels of a facade cladding on a wall has a carrier (3), having a foot plate (4) for fastening on the wall, and an anchor (7) having an anchor plate (9) for anchoring the panels. In order to be able to adjust the panels after they have been mounted, the anchor plate (9) is fitted on the end of a carrying bolt (8) which is guided displaceably, perpendicular to the wall, in a sleeve (6) on the carrier (3). The carrying bolt (8) is connected, via a driver (13), to a ring (15) having an internal thread which is in engagement with the thread of a screw-bolt (11) which is fastened, in such a manner that it can turn but cannot be displaced, on the carrier (3). The screw-bolt (11) is arranged beside or beneath the anchor plate (9) such that it can be turned by means of a suitable tool which acts, through a joint between two neighbouring panels, on an actuating head (12) of said screw-bolt. <IMAGE>
