Abstract (en)

[origin: EP0563745A1] The present invention relates to a clockwork movement fitted with means for guiding a stem. This movement includes clockwork means (H) capable of providing a time indication and at least one control member (34) formed by the stem and intended to act on the clockwork means (H), this control member (34) being guided axially and/or in rotation by way of guiding means, this movement being furthermore characterised in that the said guiding means consist of three guiding pieces (38, 40, 42) mounted and held one on the other sandwiched to form between them a housing in which the control member (34) is received freely. <IMAGE>
