Abstract (en)
[origin: EP0563784A1] The invention relates to a tailboard hinge (1) having a hinged part (3) located on the loading surface and a hinge part (2) which is located on the tailboard and which possesses a bearing lug (25) for the releasable reception of the hinge pin (35) dependent on the pivot angle. The hinge part (2) located on the tailboard is designed as a housing-like covering hinge part which, in the closed state, virtually completely covers the hinge part (3) located on the loading surface. Furthermore, a retaining rib (27), cooperating with the hinge part (3) located on the loading surface, for axial securing dependent on the pivot angle is arranged on the housing-like covering hinge part (3). <IMAGE>
