Abstract (en)

[origin: EP0563905A1] A device for exchanging a full reel for an empty reel in a winding device and in particular in the winding device of a double twist stranding machine (1) has a reel gripping device (24) in which the strand-shaped material (L) held between a laying device (120) and the full reel (5) is sought and grasped. After the grasping of the strand material (L), the reel (5) is rotated back and the gripping device (24) is removed from the reel (5) to form a loop of strand material (La, Lb). Subsequently the strand material (L) is cut off in the region of the full reel (5) by a cutting and holding device (43) and is held such that the full reel (5) is removed from the winding device and can be replaced with an empty reel. <IMAGE>
