Abstract (en)
[origin: EP0564372A1] The present invention relates to a offset printing machine. <??>This machine is characterised in that the bearings of the blanket cylinder (5) are mounted fixedly on the flanges (7, 8) of the cassette (6), in that the bearings of the plate cylinder (4) comprise means for adjusting the position of the axis of the plate cylinder (4), and in that each of the front (7) and rear (8) flanges of the cassette (6) carries a mechanism (18-31) for connection between movable control means of the printing machine and the means for adjusting the bearings of the plate cylinder (4), in order to adjust the position of the axis of this cylinder as a function of the required printing conditions. <IMAGE>
