Abstract (en)
[origin: WO9212069A1] The bag (1) of the parallelepiped packet includes a device for forming an opening (30) in a wall parallel to the direction of compression of the articles, said articles (31) being arranged in at least one stack in said bag (1), and an expanding device allowing a user to increase the internal volume of the bag (1) and decompress the articles, e.g. by increasing (\$g(D)) the length (L) of the parallelepiped packet. The bag may be used in particular for packaging nappies.
