Abstract (en)
[origin: EP0564892A1] The invention relates to a cantilever shelf for elongate products, such as boards, pipes, profiled iron and the like, having stands and cantilever brackets (4) extending therefrom, punch-outs (3) being provided in the stands, and the cantilever brackets being fitted in each case with two hooks (5), which are bent upwards in an L-shape and extend beyond the upper side of a cantilever bracket, for hooking releasably into the punch-outs, and the stands being constructed as T-profile stands and the punch-outs being arranged in the flanges (2) of the T-profile stands in pairs spaced apart and at the same height one above the other, a foot plate (7) being attached to the end of each cantilever bracket, the said hooks being situated as holding elements on said foot plate. For the unproblematic setting or adjustment for the even alignment of the cantilever brackets relative to one another in one plane, an adjusting member (20) is arranged in the lower region of each foot plate (7), said adjusting member projecting towards the flange (2) with an adjustable support length (S). <IMAGE>
