Abstract (en)
[origin: EP0564910A1] Colour-photographic silver halide material with a base and, applied to the base, at least one blue-sensitive, yellow-coupling silver halide emulsion layer, at least one green-sensitive, magenta-coupling silver halide emulsion layer, at least one red-sensitive, cyan-coupling silver halide emulsion layer and conventional interlayers and protective layers, the silver halide emulsion of at least one of the silver halide emulsion layers consisting of at least 80 mol % of AgCl and at most 0.5 mol % of AgI, and this silver halide emulsion being doped with in each case at least one metal compound from the groups (a) and (b), (a) comprising the metals rhodium, iridium, osmium, ruthenium, rhenium and cadmium, and (b) comprising the metals gold and platinum, is distinguished also by very good developing kinetics.
