Abstract (en)
[origin: US5445084A] A transport pallet includes a support surface which may be constituted by a support plate (2) or by cross-planks (20) as well as three beams (3a-3c) which are fixed beneath the support surface. The beams are fixed to the support surface by pins (5) having a latch of the bayonet type, which pins are provided to traverse the support surface as well as an upper portion of the beams before being locked by a 90 DEG rotation. The beams are fabricated of an injected plastic material, and the pins, as well as the support surface may be made of any material including injected plastic materials. The beams may include straps (24) which permit fastening of a load (30) onto the pallet (1).
