Abstract (en)
A jet for a whirlpool bath which comprises a main body (12) having a chamber (14) therein in which water and air may be mixed and a jet orifice (18) within which there is a swivellable doughnut-shaped plastics material member (34) enabling the direction of the water jet to be altered characterised in that a bore (38) is positioned below the jet orifice at or near the lower-most point of the jet whereby to drain water otherwise trapped behind the member (34). This jet of the invention reduces trapped water in whirlpool bath systems to negligible proportions. <IMAGE>
