Abstract (en)
[origin: EP0565514A2] To increase the value of a key, especially of a flat key, for example a car key, the head of the key is produced from a precious metal and is connected releasably to the shank 1 of the key. A snap fastening serves for connecting the shank 1 to the head 2 and is brought about by studs 8 insertable into holes in the head 2 and shank 1 and by a clamping plate 6 inserted into the head 2. The technical effect of the assembleable key is that, when the vehicle is changed, the head can be exchanged for a key of another type of vehicle or of another lock. There is also the possibility that the precious metal can be used for other processing work. <IMAGE>
