Abstract (en)

[origin: US5441738A] PCT No. PCT/FR92/00939 Sec. 371 Date Jun. 16, 1993 Sec. 102(e) Date Jun. 16, 1993 PCT Filed Oct. 8, 1992 PCT Pub. No. WO93/09211 PCT Pub. Date May 13, 1993. There is disclosed a process for improving a glycerolyzed oil. The oil is heated until any crystals which have formed have disappeared. Then the oil is crystallized by slow stirring for eight to seventy-two hours until an end of crystallization temperature of typically between 0 DEG and 15 DEG is reached. Finally the crystals which have formed are separated at the end of crystallization temperature. The process can be iterated at two successively lower end of crystallization temperatures.
