Abstract (en)

[origin: EP0565734A1] A resin composition comprising a specified ethylenic copolymer, a polyhydric alcohol and a reaction promoter, and a thermally reversibly cross-linking molding produced therefrom. Because both the composition and the molding have a high cross-linkage dissociating velocity when heated and a high cross-linkage forming velocity when cooled, they can be utilized in various applications including melt molding as substantially practicable, thermally reversibly cross-linking composition and molding.
