Abstract (en)
[origin: EP0565828A1] The invention relates to a pressure-compensating element 1, in particular for use in the cooling system of a motor vehicle, having a housing 3 in which a valve unit is arranged which acts in two directions. In this case, the valve unit consists of an inner part 4 and an outer part 5 made of elastic material. The inner and the outer parts 4, 5 have a first and a second opening and closing region I and II which are located with spacing from one another, the inner part 4 having a sealing region 6 located in the housing 3 for the sealed connection to a part 2 of the cooling system. <IMAGE>
