Abstract (en)

[origin: EP0565967A1] Pot-shaped containers, in particular buckets 1 or the like having a lid 6 whose edge 5 can be connected to an attachment flange 4 or the like which is moulded onto the container edge 3 and projects outwards are already known, in which in the catch position of the lid 6 an inwardly projecting strip 13 moulded onto the circumferential edge 12 of said lid engages behind the outer edge of the attachment flange 4. In order to guarantee both an intensive closure between the bucket edge 3 and the lid 6 and at the same time to allow easy raising of the lid from the bucket edge, the strip 13 engages snugly and in a sealing manner around the outer edge 18 of the attachment flange 4 and at least one tool 14 is arranged on the container edge 3 for detaching the lid 6. <IMAGE>
