Abstract (en)
[origin: EP0566034A1] Cold-briquetted and thermally aftertreated coal, preferably of low-volatility, low-sulphur fine coal such as anthracite, with a water-containing binder containing molasses and starch and also an inorganic hardener. The binder is inexpensive and, in the combination of molasses and starch and also an inorganic hardener, gives a cold-briquetted coal having adequate green strength and storage stability and also good drum strength, compressive strength and stability in a fire.
