Abstract (en)

[origin: EP0566052A1] A road making apparatus, in particular for repairing road surfaces (9), is designed as an apparatus (1) with a movable fleece-laying unit, which is assigned, in the region of a chassis (8), a drive (62), an adhesive-medium tank (18), a control region (23) and a number of laying and pressing members (17, 16, 22), which make possible an adhesive-medium discharge, a fleece supply as well as fleece pressing, in such a manner that at least one laying section (20, 20'), which can be separated from a fleece supply roll (14, 14'), can be stuck on a predetermined road section (10) so as to be free of folds. <IMAGE>
