Abstract (en)

[origin: EP0566456A1] The invention relates to an apparatus for sorting objects, particularly letters, having different destinations. The apparatus comprises n sorting machines (M_i) connected to a common conveyor (10). Each machine has bins (30 to 36) corresponding to p_i of the N possible destinations. The objects introduced through the entrance (12) to the machine (M₁) and not corresponding to one of the p_i destinations are directed to the holding zones (M'2 to M'5), each zone corresponding to the destinations corresponding to the n-1 other sorting machines (M₂ to M₅) to which the objects are periodically transferred. <IMAGE>
