Abstract (en)

The present invention relates to a device for cleaning the ventilation circuit of an electrical household drying appliance which includes a fan chamber (1), a fan (2) equipped with blades (3) and driven by a motor, and is characterised in that it includes at least one opening emerging inside the fan chamber (1) and spraying at least one liquid jet (J) onto the blades of the fan (2) whilst the latter is rotating. The present invention relates to washing-drying machines. <IMAGE>
