Abstract (en)
[origin: EP0566483A1] The present invention relates to an anti-drilling insert (15) intended to be fitted freely rotatably in front of the key entrance of a lock cylinder (4), this insert (15) consisting of a body of revolution (15) provided with a slot (17) for the passage of the key. According to the invention, the body of revolution (15), produced from a first material, contains weights (18-21) made from a second material of high hardness, the first material having a resilience higher than that of the second material. The greatest distance between two weights is preferably less than 7 mm. The present invention also relates to a cylinder lock equipped with such an anti-drilling insert (15). <IMAGE>
