Abstract (en)

[origin: EP0566529A1] The device has a differential epicyclic planetary gear mechanism having a motion (5) arranged inside the gear rims (2, 3), and is connected to the moon ball (1) to form a structural unit which can be mounted directly on a conventional clockwork (45). A clock which is provided with the device indicates in three dimensions the current phase of the moon during a lunation at any given instant. <IMAGE>
