Abstract (en)

[origin: WO9216377A1] In a device for transporting sections (28) of a recording substrate from a printer, which comprises a cutting unit (12) to separate the sections (28) from the recording substrate, which can be moved to and fro across the width of the recording substrate transversely to the latter's direction of transport (A) in a cutting stroke and a return stroke, transport components (32, 38) are arranged in the transport direction (A) behind the cutting station and can be coupled to the cutting unit (12) via a gear arrangement (14, 24, 52, 50, 44, 36) in such a way that they grasp the separated section (28) and advance it in the transport direction (A) on the return stroke of the cutting unit (12).
