Abstract (en)
This container for waste consists of a cardboard box (100). An inner envelope (200) is intended to receive the waste and its upper part is held in an opening made in the upper flap (51-54) which is folded down first. At least one of the upper flaps includes a closure and support (bearing) tab (71,74) at its end, intended to interact with the opposite face of the container. Once filled, the inner envelope (200) is closed by means of a tie and all the upper flaps are folded down. The upper flap (52) which is folded down last includes a tab (72) capable of being inserted between the flaps (51,53,54) which have already been folded down and the opposite face (4) of the cardboard box. This tab includes a slot (721) capable of receiving a detachable safety locking tab (442) of the opposite wall (4). <IMAGE>
