Abstract (en)
[origin: EP0566826A1] A pressure control valve is proposed, especially for controlling the vacuum in the crankcase. This pressure control valve is arranged on an oil filler opening 33 and simultaneously assumes the function of a cover for the oil filler opening. In the oil filler opening a pipe 37 is provided, by way of which the crankcase gases can be led to the air feed of the internal combustion engine. The pressure control valve serves for setting a certain vacuum in the crankcase, is of compact construction and can easily be replaced or inspected. <IMAGE>
