Abstract (en)

[origin: EP0566969A2] A method for manufacturing a cable harness, the leads (10) on the one hand being provided in preparatory method steps with contact elements (12) (= initial contact making) and on the other hand being arranged in their final required position with respect to one another (= initial cable harness preparation), an integral sheath (2), which sheaths both the contact elements (12) and the leads (10), being integrally formed in a single final method step and, in particular, a cable harness which is manufactured using this method and has leads (10) which on the one hand are provided with contact elements (6,12) and on the other hand are arranged in a defined relative position with respect to one another, having one or more mouldings, which enclose the leads (10), for permanent fixing of the leads (10) in their relative position with respect to one another, and having coupling parts (1,7,26) in the region of the contact elements (6,12), an integral sheath being provided which acts both as the moulding and as the coupling part (1,7,26).
