Abstract (en)

[origin: EP0567003A1] In a door stop for motor-vehicle doors which is structurally combined with a door hinge (1) and in which a door-holding rod (22) connected to one hinge wing (2) passes through a holder housing (5) arranged on the other hinge wing (4) and supporting braking or holding bodies (10, 12) cooperating with catch steps of the door-holding rod (22), provision is made, for the purpose of simplifying its production and mounting and, in particular, for the purpose of reducing the installation space required in the vehicle body, for the door-holding rod (22) and the hinge wing (4) of the door hinge (1) carrying the holder housing (5) to be arranged oriented parallel to one another and lying one above the other, the hinge wing (4) being formed by a U-shaped sheet-metal pressed part, the profile side cheeks (6, 7) of which are extended upwards relative to its fastening base (8), in the region of its free end, in order to form the holder housing (5). <IMAGE>
