Abstract (en)

[origin: EP0567674A1] A heat exchanger for cooling synthesis gas produced in a cool gasification plant consists of heat exchanger tubes (1) through which the synthesis gas to be cooled flows, and which are held in two tube plates (2, 3) and surrounded by a jacket (4). The tube plate (2) on the gas inlet side is covered by a layer of individual cuboid snouts (12) which are arranged next to one another and abut one another at the outside edges. Each snout (12) has a conical opening (15) which narrows into a tube section (14) which projects into a heat exchanger tube (1). <IMAGE>
