Abstract (en)  
[origin: EP0567832A1] The invention relates to a lock-cylinder key (15) with at least one vertical rib (19,20), projecting on the wide side of a core region (SK), as the carrier of end locking notches (21), and proposes, in order to achieve a substantial disguising of the profile, that the longitudinal mid-plane (LH-LH) of the vertical rib (19 or 20) be inclined at an acute angle to the longitudinal mid-plane (LK-LK) of a Z-shaped core region (SK).
