Abstract (en)

A load holding device in a balancing unit comprises means for balancing the centre of gravity of the same with respect to the suspension wire (2) of said unit, in presence of a load (12), said means comprising a first tubular element (5) that is integral with said device and fixed in a slanting position with reference to the vertical axis of said same, and a second tubular element (6), fixed at the lower end of said wire (2) and slidingly housed in an axial direction within said first tubular element (5) and fixed to the same by means of elastic means (9) urging the two elements in a retracted position. <IMAGE>
