Abstract (en)

[origin: EP0568470A1] Each oscillating lever (11) comprises two movable locking members (18) associated with elastic return means (20) which tend to lay them laterally against the corresponding double rocking hook (14), in order to immobilise the latter angularly when it has been grasped by an actuating knife (17), whilst at the same time ensuring that it is released at the moment of control or selection, that is to say at the moment when the two knives come simultaneously into contact with the oscillating lever in question. <IMAGE>
