Abstract (en)

[origin: WO9212706A1] A method of treating a cluster of diseases associated with elevated blood sugar levels comprising the administration of a dietary supplement of chiro-inositol. Chiro-inositol is an essential element for the synthesis of an insulin-directed mediator apparently responsible for the activation of pyruvate dehydrogenase-phosphatase. Disease conditions commonly associated with insulin-resistance, such as hypertension, lactic acidosis, obesity, coronary artery disease, and the like, are treated by administration of sufficient chiro-inositol to meet normal metabolic levels.

Abstract (fr)

Procédé de traitement destiné à un ensemble de maladies associées à des taux élevés de glycémie comprenant l'administration d'un supplément alimentaire de chiro-inositol. Le chiro-inositol est un élément essentiel pour la synthèse d'un médiateur d'insuline qui est apparemment responsable de l'activation de la pyruvate déhydrogénase-phosphatase. En administrant une dose suffisante de chiro-inositol pour obtenir des taux métaboliques normaux, on traite des états pathologiques associés communément à l'insulinorésistance, tels que l'hypertension, l'acidose lactique, l'obésité, la coronaropathie et analogue.
