Abstract (en)
[origin: GB2249120A] A building structure such as a cavity wall outer skin, is repaired by cutting a groove in the surface of the wall, injecting a grouting material into the groove, and embedding a rod (10, 12) in the grouting material. Further grouting material is injected into the groove, a second rod is embedded, and further grouting material is injected. The groove is finally pointed to match the existing surface. The preferred grouting material is an epoxy resin. <IMAGE>
