Abstract (en)

[origin: WO9310291A1] In order to float a yarn better into the nip of the pair of input rollers (2, 3) of a drawing unit on a fine-spinning machine, in particular a jet-spinning machine, the invention calls for a cone-like end-piece (5) to be fitted to the pressure-roller (3) of the pair of delivery rollers (2, 3). The end-piece (5) is preferably connected rigidly to the spindle of the pressure-roller. This prevents the yarn from being damaged during the preparatory phase, before the yarn is floated into the rollers, which ensures that the yarn is introduced into the nip of the rollers rapidly and at the correct moment.
