Abstract (en)  
[origin: EP0568725A1] In order to provide a water-float coupling device which, even when floats on the water are moved relative to one another, for instance, by waves, prevents the floats from being unintentionally disconnected from one another, a water-float coupling device according to the present invention comprises: tightening member 15 for maintaining, when a locking part 11 is engaged with fastening member 9 to connect a plurality of floats 2 to one another, the locking part 11 engaged with the fastening member 9. <IMAGE>
