Abstract (en)
[origin: EP0580186A1] A ground cleaning machine has a ground cleaning device with at least two ground cleaning elements (7, 17), of which at least one (17) is suspended so as to be displaceable in such a manner that the working width of the ground cleaning machine can be changed. Coupled to the at least one displaceable ground cleaning element (17) is a displaceable suction element or a displaceable wiping-off strip (20) which follows the movements of the displaceable ground cleaning element. The displaceable suction element or the displaceable wiping-off strip (20) is assigned to a suction device whose working width is automatically adapted in this way to the working width of the ground cleaning device. The at least one displaceable cleaning element (17) is suspended in such a way that it is situated behind the articulation point (15) in the working direction, at least in the case of a narrow working width, so that it is pivoted rearwardly inwards when the working width is reduced. <IMAGE>

Abstract (fr)
Une machine de traitement de planchers comprend un dispositif de traitement de planchers ayant au moins deux organes de traitement de planchers dont au moins un est suspendu de manière à pouvoir changer de position, de sorte que la largeur de travail du dispositif de traitement de planchers puisse être modifiée. Un élément d'aspiration (46, 64) ou une baguette d'essuyage (20) à position modifiable qui suit les mouvements de l'organe de traitement à position modifiable est relié audit organe. L'élément d'aspiration ou la baguette d'essuyage à position modifiable est associé à un système d'aspiration dont la largeur de travail s'adapte ainsi automatiquement à la largeur de travail du dispositif de traitement de planchers.
