Abstract (en)
For serially dispensing flexible plastic bags or the like from a wound package in which the bags are joined along perforated severance lines a housing (10) defines a confining chamber adapted to receive and confine the wound package of bags for unwinding during dispensing of bags therefrom. The housing (10) has a bag dispensing, elongate, narrow slot (12) through which individual bags may be serially drawn and dispensed. The slot (12) has a smoothly curving, sinuous profile longitudinally thereof so that the bags may be smoothly drawn from the housing and separated along the perforated severance lines with the next bag being retained by the sinuous slot in position for dispensing. <IMAGE>
