Abstract (en)

[origin: EP0569692A1] The apparatus serves for introducing stacks of material to be packaged (1), for example sausage slices, into troughs (4), the size of the trough corresponding essentially to the dimensions of the material to be packaged. Grippers (2) are provided, which, during the introduction operation, remain essentially above the trough edge (3) and, in this position, dispense the material to be packaged (1). If appropriate, extensions (5) which engage under the material to be packaged can also be provided. The extensions (5) can move above the trough (4). <IMAGE>
