Abstract (en)

[origin: EP0569934A1] What is provided is a device loaded with a pressure medium and having a valve (10, 21) which, in a first position connects the device to a pressure-medium source (11) for the supply of pressure medium and, in a second position, ventilates the device. Furthermore, a control (13, 22) for controlling the valve (10, 21) is provided. So that a damping or even a holding of the respective state can be achieved despite constant supply of pressure medium, the valve (13, 21) can be put into a third position, in which the connection between the pressure-medium source and the device is closed. <IMAGE>
