Abstract (en)

[origin: EP0570026A2] The invention relates to a rotary bearing for a setting-out arm or the like of a turn-and-tilt wing of a first window, a door or the like, there being pivotably mounted on the basic body (9) of the setting out arm bearing (10,11) a bearing journal (16) for the lower bearing (7) of an at least tiltable second wing (3) arranged above the first wing (4). By means of this rotary bearing, a further wing mounted above the window wing can be brought as near as possible to the lower wing, without an impairment of its functioning having to be accepted. <IMAGE>
