Abstract (en)

The support includes two tubular beams (23) pointing longitudinally and provided so that the fork (14) of the truck can be engaged therein and then driven in a downwards direction in order to lift the truck which thus loads itself onto the lorry; complementary means (27, 28) for supporting the truck in a loading position; and means (35) for fixing onto the platform (9) acting by clamping at least one member (11) which projects under the platform; the said stowing support being provided so that it can be a removable assembly. The system includes, besides the support, anchoring means (31, 32) on the platform and on the truck, and a pin buckle (33) which connects the anchoring means. The lorry is capable of loading or unloading the platform by virtue of a handling device with an articulated jib (bracket) a hydraulically controlled. <IMAGE>
