Abstract (en)

[origin: EP0571304A1] The simultaneous coating of the two faces of the support (1) is carried out by means of two superposed dies (5, 6), each of which comprises two doctors (8, 9) which define with their frame (7) a chamber (11) fed from a reservoir (14, 15) by way of a collector (13) and channels (12). During its continuous advance, the support (1) is maintained under tension both in the longitudinal direction and in the transverse direction. <IMAGE>
