Abstract (en)
[origin: EP0571327A1] The packaging container has an outer container formed from a cardboard blank (7) and an inner container which is thermoformed from a plastic film. The connection, which is firm but releasable by hand, between the outer and inner containers of the packaging container is effected in a positive-locking manner in that, during the thermoforming of the inner container, bulges form in its wall which enter into cutouts (39 to 44) in the outer container. The outer container can be removed completely and easily from the inner container again for separate waste disposal. <IMAGE>
