Abstract (en)  
[origin: EP0571341A1] The machine has a first and a fourth tool (5, 6) for working respectively the lower horizontal and the upper horizontal surfaces of a workpiece (3) and a second and a third tool (10, 11) destined to work right and left vertical surfaces of the same workpiece (3); each of the tools is supported by corresponding slides (7, 12) aimed at varying the operative distance of the tool in an orthogonal direction to the plane to be worked on; each tool is equipped with a covering casing (8, 13) equipped with guides (6, 61) and pressing organs (9, 14) aimed at permitting of guiding and stabilising the workpieces (3); the vertical tools are equipped with a mobile meeting plane (15) for the workpiece (3) and regulating means (16) acting on the casing (13), on the tool (11) and on the plane (15) in such a way as to permit of varying, in consequential series on the workpieces and with independent actions, the distanced from the work plane according to a second reference diameter (D1) of the tools and the breadth (L) of the workpiece (3). <IMAGE>
