Abstract (en)
[origin: EP0571780A1] The invention relates to a screw closure, in particular for fastening a closure with a nebulizer pump on a glass bottle. Provided on the thread (14) of the threaded mouth of the glass bottle is at least one ramp region (16, 18) which interacts with a counter-surface of the closure to secure the closure against unscrewing. A safeguard of the closure in the closed position which is simple in design and therefore cost-effective is implemented in that the ramp region (16, 18) extends radially outwards from the thread (14), in that the ramp region (16, 18) has a corner or edge on its radially outer end (20, 22), and in that the counter-surface can be deformed by the corner or edge (20, 22). <IMAGE>
