Abstract (en)

The equipment comprises means for dividing a flow of water, which comes from a supply duct (10) and is directed into a washing tank of the domestic electric appliance, into at least two partial flows, means for determining whether the quantity of water which has flowed in one of the at least two partial flows, known as the measuring flow (22), corresponds to a predetermined value, the ratio between the value and the total quantity of water to be supplied to the washing tank being the same as the ratio between the measuring flow (22) and the total supply flow, and means for stopping the flow of supply water when the quantity of water which has flowed in the measuring flow (22) corresponds to the predetermined value.
