Abstract (en)

[origin: EP0571825A1] To achieve good damping of bell modes, using less attenuating materials such as, for example, styrene butadiene rubber, it is proposed according to the invention to form the bead (10) from rubber and to construct the flange (13), which is connected to the diaphragm (14), with a peripheral damping lip which stands up on the side (15) of the flange (13) which is connected to the edge of the diaphragm (14). <IMAGE>
