Abstract (en)

[origin: EP0571927A1] What is described is a retainer for door or window shutters, which consists of a bearing member (7) fastened to the shutter, for a movably mounted bolt element (9) and of a holding part (3), fixed to the wall, for the releasable locking of a shutter (5) to a wall (1). In the locking position, the bolt element (9) and the holding part (3) engage one into the other. A spring (17) is arranged at least on the bearing member (7) or the holding part (3) in such a way that, in the locking position, this spring (17) engages under prestress on the holding part (3) or the bearing member (7). <IMAGE>
