Abstract (en)

[origin: EP0572318A1] The invention relates to a box, comprising movable locking means mounted on the latter and returned towards a closing position, cooperating with fixed locking means mounted on the door, and in which box retention means for retaining the movable locking means in the opening position are provided. According to the invention, the movable locking means comprise a longitudinal rod bearing a notch (21), the retention means (41) extending perpendicularly to the rod so as to cooperate with the notch in the opening position and to be separated from the latter by the door in the closing position. <IMAGE>
