Abstract (en)

[origin: EP0572690A1] Voltage supply from a number of reacting (perturbing) control outputs (1-4...) for regulating the voltage (8) of the control outputs. A common load of the voltage (8) of the control outputs (1-4...) is regulated as a function of actuating signals (7). This regulated loading (6) is effected by means of an electronic regulating circuit (5) which relates its on-board power supply voltage from the voltage (8) to the respective actual value of the voltage. <IMAGE>
