Abstract (en)
[origin: EP0572829A1] A roll adjustment device with hydraulic adjusting cylinders (10) of a levelling machine for sheets and strips, with upper and lower levelling rolls which are arranged offset to one another and are supported along their length by means of back-up rollers which, for their part, are supported on crossmembers (4, 5) and arranged in roll frames, at least the upper crossmember being adjustable for the purpose of positioning the levelling rolls, is designed so as to be more reliable in operation and variable as regards the adjusting travel by dividing up the total stroke of each adjusting cylinder (10). <IMAGE>
